

16 series 48v solar telecom integrated cabinet battery bms

Battery management system is crucial for maintaining optimal performance and extending lifespan of your lithium-ion batteries. Learn more about its benefits here.

This smart BMS supports up to 16 series cells (16S) and is designed specifically for 48V lithium-ion and LiFePO4 battery packs, ensuring safe and efficient operation in solar energy storage systems.

At working mode, BMS will monitor battery voltage, current, temp, and communication and function is available arging MOS and discharging MOS are closed, Battery will operate as the settings.

We can connect the BMS to the computer through RJ45 to USB Adapter, install the Battery Monitor software, and view the detailed information of the Battery string and modify the parameters.

Introduction on its feature and characteristics:

The JK BMS 16S 48V 200A features a comprehensive protection system that sets new standards in battery safety and reliability. The system continuously monitors multiple parameters including cell ...

Advanced Battery Management: Designed to monitor, balance, and protect LiFePO4 lithium-ion battery packs (48V 280Ah/230Ah) with 16-series (16S) configurations. Ensures safe charging/discharging via ...

A3:Typically, 16 cells connected in series are needed to construct a 48V LiFePO4 battery pack. A 16-cell series (16S) design is typically utilized in real industrial standards for energy storage ...

The M48 Gen1 Battery Management System represents Prohelion's centralized (but modular) battery management solution, specifically designed for <16S 48V nominal lithium battery systems.

48 Volt rack mount battery modules with capacities up to 10KWh in a single module. Battery racks can be supplied for larger energy storage capacity applications (UPS, Data Centres). VTG's BESS ...
