

The purpose of this research is to introduce a neural network-based virtual impedance integrated with a bi-directional grid inverter control technique that improves stability during the dynamic operation of ...

Abstract This paper presents a control method converters for hybrid AC/DC microgrid in stand-alone mode, the converters will be controlled to operate bidirectionally, transmitting power back and forth ...

The suggested technique is applied to a direct matrix converter employed as an interface between two power sources as the main grid and a microgrid to realize a stable four-quadrant power flow control ...

Learn how bidirectional AC-DC/DC-AC power modules enable two-way energy flow, fast mode switching, high PF/low THDi, and scalable parallel operation for microgrids, storage, EV/V2G, industry, and ...

Often combined with solar or wind power Bidirectional AC-DC converter and bidirectional DC-DC converter to control energy flow

This paper proposes a flexible and energy-efficient power conversion system capable of bidirectional energy flow between AC and DC microgrids, as well as electric vehicles (EVs).

This paper proposes a decentralized bidirectional voltage supporting control scheme for the multi-mode hybrid ac/dc microgrid, which can provide uninterruptable ac and dc voltages in case of unintentional ac and dc ...

In this work, we propose a novel finite control set model predictive control (FCS-MPC) strategy to manage the charging and discharging of a battery in a DC microgrid powered by renewable...

VEHICLE V2G needs "Bi-Directional" Power Flow. Ability to change direction of power transfer quickly. High efficiency >97% (End to End) at power levels up to 22KW.

This paper presents a novel power flow control strategy for residential DC Microgrids using a dynamic bidirectional converter with an energy management scheme, implemented on Field Programmable ...
