You cannot mix voltages: Plugging a 24V inverter into a 12V battery will result in weak or no power, while connecting a 12V inverter to a 48V battery will fry the inverter's circuits.

While 12V batteries can't directly power 48V inverters, modern conversion technologies make this combination viable for solar installations, marine applications, and mobile power systems.

Yes, a 48V battery can be used on a 12V inverter. But, the voltage of the battery will be too high for the inverter, which could damage the inverter or cause it to malfunction.

The short answer is that a 12V panel cannot be connected directly to a 48V inverter -- but with the right wiring and an MPPT charge controller, 12V panels can work perfectly in a 48V system.
