

Are central and Eastern European countries advancing renewables ambitions?

Central and Eastern European countries are advancing renewables ambition, but not yet in line with their potential. The upcoming Three Seas Initiative Summit is an opportunity to secure a low cost, resilient and interconnected clean power system.

How can the EU tackle the energy transition in central and Eastern Europe?

Additional areas the EU should now seek to support to tackle the energy transition in Central and Eastern Europe include: Social measures to improve low-income households' access to fossil free alternatives and address labour shortages in clean industries. Investments in grid expansions and modernisation.

Where are Renewables located in Europe?

Renewables are often located far from population centers, such as wind turbines on coastal areas and solar panels in the southern regions. This requires a massive buildup of transmission capacity to move the energy to demand centers. 3. Is Europe's Transmission Infrastructure Ready for the Energy Transition?

Can Central and Eastern Europe transition to a cleaner future?

Central and Eastern Europe's transition is possible, but inadequate investment and infrastructural gaps loom large. However, through the development of robust systems led by the Three Seas Initiative, Central and Eastern Europe has the opportunity to unlock the potential of a cleaner future.
