

Cost Analysis of Two-Way Charging for Mobile Energy Storage Containers

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Why are battery system costs expressed in \$/kWh?

By expressing battery system costs in \$/kWh, we are deviating from other power generation technologies such as combustion turbines or solar photovoltaic plants where capital costs are usually expressed as \$/kW. We use the units of \$/kWh because that is the most common way that battery system costs have been expressed in published material to date.

Why are charging and switching costs important in logistics city distribution?

Electric vehicles rely on power exchange and fast or slow charging to replenish their electric energy. In logistics city distribution, time efficiency is crucial. Hence, we separately consider the charging and switching costs for fast charging and power exchange modes.

How can EV charging systems support a growing EV ecosystem?

As the adoption of electric vehicles (EVs) continues to accelerate, the development of efficient and scalable charging infrastructure has become a critical focus. Charging systems, whether integrated into vehicles or deployed externally as standalone facilities, play a pivotal role in supporting the growing EV ecosystem.

Cost-revenue analysis based on a real electric tariff suggests that the demand charge saving covers the capital costs of needed hardware and the compensation for EV drivers to provide ...

Executive Summary In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The ...

The mathematical model aims to minimize fixed costs, driving costs, electric energy consumption costs, and charging and discharging costs to optimize EV logistics path selection and ...

In this study, we investigate the adoption of MCs in the EV parking and charging system (EVPCS) and demonstrate its cost-competitiveness through comparison with fixed chargers (FCs). ...

Can mobile charging stations be used for EV charging? To this end, the concept of mobile charging stations (MCSs) has emerged in the last years to effectively use energy storage systems for EV ...

This study proposes a method for optimizing the charging cost by utilizing renewable energy resources for an EVCS in a modified IEEE 33 bus system.

The two-layer optimization model is solved with a column-and-constraint generation algorithm. The second

Cost Analysis of Two-Way Charging for Mobile Energy Storage Containers

stage optimizes the discharge/charge power and paths for mobile energy ...

Abstract: This paper presents an initial investment cost analysis of public transportation systems operating with wireless charging electric vehicles (EVs). There are three different types of ...

This paper presents a comprehensive analysis of global EV charging infrastructure and its integration with sustainable energy sources, addressing critical challenges in charging station ...

With the popularity of electric vehicles (EVs) and the gradual maturity of the technology of bidirectional power transfer between EVs and the grid, EVs as a mobile energy storage device to ...
