

This policy brief reviews developments in Cameroon's electricity generation and outlines recommendations to support the generation of electricity that remains below capacity.

In 2020, the Energy of Cameroon (ENEO), the main energy supplier, reported electricity production of about 1529 MW, with 61.7% from hydroelectric power stations, 24.1% from thermal power stations, ...

In Cameroon, access to power remains a critical developmental challenge. Despite substantial government subsidies and vast hydropower potential, only 71% of the population has ...

The goal is to boost generation, expand transmission capacity, and improve distribution while accelerating the rollout of renewable energy. To reduce investor risk, the government plans a ...

In 2021, investments made by ENEO conducted to build 593 km of power lines and thus improve access to electricity.

Electrification rates are relatively high in Cameroon compared to the Central African region: 54% of the population has access to electricity, while consumption remains low.

o The Nachtigal dam increased national capacity by approximately 30% and has reduced power outages. o Cameroon has diversified its energy ...

However, there are sustainable solutions that minimizes the required new capacity planned by the government. This paper analyses the implications of these sustainable policies on the ...

o The Nachtigal dam increased national capacity by approximately 30% and has reduced power outages. o Cameroon has diversified its energy mix, incorporating gas-fired plants and solar ...

Despite its richness in natural resources, Cameroon faces frequent electricity outages due to aging infrastructure. Fast-power solutions could be a significant opportunity for U.S. firms.

A comprehensive view of how various factors influence the electricity sector in Cameroon would help in understanding the challenges for the future development of the sector.
