

This system will store Hydrogen, Oxygen and both clean and hot water for use by the hospital, with a "Plug & Play" set-up to ensure ease of installation and a high level of scalability.

This policy underscores PNG CORE's commitment to facilitating a just and equitable transition towards a more sustainable and resilient energy future for Papua New Guinea (PNG).

ANGAU Memorial Hospital is one of the largest hospitals in Papua New Guinea that provides critical medical services for the city of Lae and its neighbouring residents.

Health Workers at Daru General Hospital have been relieved of vaccine storage concerns, thanks to a new solar-powered vaccine fridge donated by the Digicel Foundation and ...

This project brings together BPP Renewables (UK) and Pacific Sterling Limited (Papa New Guinea) to identify the most appropriate energy storage mechanism for rural communities

Containerized energy storage systems (CESS) offer scalable, reliable power solutions for mining operations, off-grid communities, and renewable energy integration. This article explores how these ...

The switch from diesel to solar and battery storage not only ensures 24-hour power but also supports the expansion of essential services such as labor and delivery, blood storage, and...

It aims to limit the healthcare facilities' dependence on diesel generators, ensuring consistent energy supply and enabling better climate outcomes through renewable energy. Caritas Australia is ...

The renewable energy solution consists of a 10kWp solar array coupled with a 34kWh Tesvolt battery storage energy system. The energy solution runs the off-grid facility independently from the diesel ...

With funding support by Innovate UK's Energy Catalyst, the feasibility will focus on meeting the energy needs of a remote rural hospital in the Kikori District, Gulf Province, Papua New Guinea (PNG), with ...
