

# How many households in Colombia generate electricity from solar panels

Colombia is making a significant leap in renewable energy with a \$2.1 billion initiative to install rooftop photovoltaic systems for approximately 1.3 million low-income families.

In Colombia, installed solar and wind capacity represented around 9% of the total electricity matrix in 2024, a significant increase from the 1.5% recorded in 2022.

In total, the project has brought reliable, affordable power to nearly 300 families for the first time. This transformation is part of Colombia's Energy Communities program, an effort launched in ...

The plant includes over 3,000 solar panels, which convert sunlight into electricity using photovoltaic cells made from specific solar panel raw materials like silicon. It is expected to generate ...

According to official data from the Fund for Non-Conventional Energies (FENOGÉ), the pilot phase of Colombia Solar resulted in many households reporting electricity bills reduced by as ...

Colombia will equip more than 1 million low-income households with solar systems to replace subsidies, cut bills and add capacity to the grid.

Renewable energy in Colombia As of 2023, Colombia's renewable electricity generation capacity was 14.3 GW. Most of this capacity is hydropower. Solar power is growing fast, and in 2023 accounted for ...

Solar energy makes up about 5%, indicating a smaller but notable contribution to the green energy mix. On the other hand, fossil energy remains a significant player, accounting for about 27% of electricity ...

As the costs of solar panels and wind turbines have fallen dramatically in recent years, renewables now represent the cheapest source of new electricity generation in many parts of the world.

Colombia operates 72 MW of solar plants and has more than 1 GW under development. Colombia inaugurates 3 solar plants of 30 MW to provide green energy for 40,000 homes.
