

# How much does a 50kW data center rack cost

How much does it cost to power a data center?

With this information, the calculator can determine that your power density is 12.6 kW per rack and that it costs \$13,245 annually to power each rack at 100% usage. In your data center of 500 racks, that amounts to over \$6.6 million in total annual data center energy consumption costs. This information alone is useful.

How much power does a 500-rack data center use?

The calculator determines that, in this 500-rack data center with a power density of 12.6 kW per rack, if you are stranding 40% of our power, then that is 5.04 kW per rack or 2,520 kW across the entire data center. It also tells us that this amounts to 200 racks' worth of power.

How much does a data center rack cost?

Illustrative Annual Cost to Power One Data Center Rack (by Density, PUE, & Electricity Rate) This table shows how rack density, PUE, and location dramatically impact annual costs. An AI-capable 60 kW rack in a high-cost state could exceed \$200,000 annually, underscoring the financial implications of high-density infrastructure.

What is kilowatt per rack?

Kilowatt per rack (kW/rack) is the power assigned to a server rack in a data center. It is measured in kilowatts (kW) and represents the total power needed for all IT equipment in that rack. Colocation providers offer different power levels: Power density depends on server type, workload, and cooling efficiency.
