

What is the future of the Marshall Islands electricity system?

The future of the Marshall Islands electricity system depends on upgrading the electricity network, getting better at energy efficiency, and replacing diesel generation with renewable energy in the form of wind and solar. Most of all it depends on our people. Take a look at where we are headed.

What is the Marshall Islands electricity roadmap?

The Republic of the Marshall Islands is calling for ambitious action by all countries to reduce greenhouse gas emissions. We are leading the way by committing to net zero emissions by 2050, with significant milestones along the way. The Marshall Islands Electricity Roadmap presents costed, technically sound pathways to help achieve our NDC.

What are the different types of electricity systems in the Marshall Islands?

r solar generation or other - to be optimised in future years by 2050 Different approaches for different island systems The Marshall Islands has three main types of electricity systems: the main grids on Majuro and E eye; outer islands mini-grids; and

What is the Marshalls Energy Company (MEC)?

The Marshalls Energy Company is a semi-autonomous utility company responsible for the generation, distribution and sale of electricity on a number of islands and atolls within the Republic of the Marshall Islands. Don't let gas or diesel prices in the RMI hold you back. MEC petroleum products allow you to do much more for your money.

This document was developed by the National Renewable Energy Laboratory. The information included in this document is for general information purposes only. While reasonable ...
