

By optimizing the microgrid cluster, the total operating cost is decreased, the dependence of the microgrid cluster on the distribution network is reduced effectively, and the development and ...

Based on the assumption that the microgrid adopts the grid-connected mode, this study proposes a bi-level robust optimization framework for interconnected system coordination to address ...

To effectively reduce the microgrid cluster's operating costs and power fluctuations and achieve mutual benefits for the microgrids and the SES, the paper proposes a multi-time scale game ...

In order to maximize the utilization of renewable energy, enhance its utilization efficiency, and reduce the carbon emission of power supply, this paper first proposes a real-time collaborative ...

You have to enable javascript in your browser to use an application built with Vaadin.

Microgrid optimal dispatching has become one of the core issues of microgrid energy management and integrated control, which is of great significance to reduce energy consumption and...

To address these challenges, this paper proposes an optimized scheduling strategy for microgrids based on hybrid, multi-type data-driven methods. First, a multi-stage model is developed ...

Based on real wind and solar power outputs and load data from a low-latitude coastal region, this paper conducts a comprehensive study on the economic dispatch optimization of ...

The coordinated optimization of microgrid clusters is an effective way to ensure the reliable operation of

microgrid group system. Aiming at the minimum total o

Therefore, in order to improve the economic benefits and operational reliability of the MGC, this paper proposes a bi-level coordinated optimal dispatching strategy and uses an improved artificial bee ...

To address the issues of efficiency and real-time performance in power mutual assistance among island microgrid clusters, a two-stage decentralized dispatching optimization method ...
