

What is a drive-in racking system?

Drive-in racking systems, also known as drive through racking, are a type of high-level racks and warehouse storage racks that are customized on demand. Cantilever Storage Racks are made by installing external cantilevers on traditional rack pillars, and are racks for long objects. The cantilever can be single-sided or double-sided arm.

What is the structure of heavy duty storage racks for warehouse?

In the structure of heavy duty storage racks for warehouse, it can be divided into two parts: columns and beams. The columns are in direct contact with the ground, while the beams are usually used to store cargo. The rack supported mezzanine floor also known as mezzanine floor pallet racking.

What is wire mesh deck racking?

Wire mesh deck racking is a main product in our product line. It is widely used in warehouse, as an accompany of rack. The outside finish can be powder coated, galvanized, and also spray paint. It is commonly used as a safety measure on selective pallet rack to prevent pallets or the products stored on them from falling through the rack structure.

What is a multi level storage racking application?
