

## Percentage of household energy storage in Denmark

Key figures for development in production and consumption of energy, renewable energy, wind power, CHP, energy intensity and CO2 emissions. The Danish Energy Agency reports annual statistics on ...

The indicator shows the gross final consumption of energy from renewable energy sources (RES), expressed as a share of the gross final consumption of energy from all sources.

Denmark Total Energy ConsumptionDenmark Crude Oil ProductionDenmark Oil Products ConsumptionDenmark Natural Gas ConsumptionDenmark Coal ConsumptionDenmark Power ConsumptionDenmark Renewable in % Electricity ProductionDenmark CO2 Fuel Combustion/Co2 EmissionsIn 2022, electricity consumption decreased by 9% to 32 TWh. It remained broadly stable between 2015 and 2020 at around 32 TWh before increasing by 7% in 2021 to nearly 35 TWh. The residential sector and services are the two largest consumers of electricity consumption, with 31% and 28%, respectively, followed by industry (26%) (2022). Graph: ELECTR...See more on enerdata IEA - International Energy AgencyExecutive summary - Denmark 2023 - Analysis - IEAIn 2022, Denmark had one of the highest average household annual energy expenditures after the United States and the Netherlands. Between 2019 and ...

The energy and air emission accounts respectively shed light on energy supply, the use of energy and the emission of greenhouse gases from the Danish economy, i.e. the activity carried out by Danish ...

primary energy supply. Energy trade includes all commodities in Chapter 27 of the armonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end

Energy efficiency of final consumers, as shown by ODEX, improved by an average of 1.1%/year from 2000 to 2022 (or 22% in total). Most improvement has been registered in industry (1.9%/year or 35% ...

In 2023, the share of renewables in final energy consumption reached 42.5%, of which 71.5% for electricity, 51.8% for heating, and 11.5% for transport and district heating.

Denmark generated 88% of its electricity from renewables in 2024. Wind led the mix, followed by bioenergy and solar, while coal and gas played small roles.

The Danish energy tax (elafgift), which forms part of the electricity price payable by household consumers,

## **Percentage of household energy storage in Denmark**

was reinstated in full on 1 July 2023 after the expiration of an interim reduction.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your ...
