

Proper photovoltaic concrete support weight calculation is what stands between your solar investment and becoming neighborhood kite entertainment. Let's dig into the gravitational gymnastics of PV ...

The Solar Panel Ballast Blocks provided by RCP Block & Brick are a durable and simple way to add ballast weight to your solar panel array. Trusted and used by professional solar energy system ...

Our solar ballast blocks are poured to your specifications to prevent movement and overturning of solar panel systems. Our ballast blocks are available in a wide range of sizes, weights and mixes.

Solar Ballast blocks are specifically designed for freeze thaw durability and work with solar panel racking systems. Conforms to ASTM C1491-14 and C1884-18...

Manufactured in a standard size, each solar ballast block weights approximately 32 lbs. Ballast Blocks are a durable and simple way to add ballast weight to your solar panel array preventing movement ...

Manufactured in a standard size, each solar ballast ...

Researchers of the Block Research Group at ETH Zurich have developed an ultra-thin, self-supporting, photovoltaic concrete structure with multiple layers of functionality.

These durable, easy-to-install blocks are designed specifically to keep solar arrays firmly in place, providing a strong foundation that doesn't require roof penetration.

Precast concrete ballast footing used to securely position solar panels and related mounting hardware and help prevent movement and overturning of solar panel systems.

Vrain Block is excited to introduce our ASTM International Certified Solar Ballast Block product line. Solar panels in zero-penetration, flat-roof applications require ballast weight to secure the panel to ...

Concrete solar ballast units are used for flat ground and roof-mounted applications requiring ballast weight to secure panel arrays and provide the dispersion of point loads without the need for roof or ...
