

Qijia Wind Power Generation Transport Blades

This innovative product can be installed on low flat semi-trailers and hydraulic module semi-trailers, making it ideal for transporting rotor blades and wind blades for steep mountain roads ...

The concept called Pack and Stack, can be used to transport virtually all LM Wind Power blade types - both by sea, barge and road. It makes handling less complicated and offers the best possible ...

The Wind Power Generation Blade Carrier is an essential component of the wind energy supply chain, enabling the secure and efficient transport of delicate and oversized turbine blades.

The invention relates to a long-distance transport device for wind power generation blades, which comprises a blade support base.

Our blade trailer demonstrates exceptional adaptability and reliability, especially in mountainous wind farms and complex terrain conditions.

We specialise in transporting blades, nacelles, towers, hubs and foundations by road, rail, short-sea shipping or deep-sea shipping. Every project is managed with precision and care to ensure timely ...

However, the transportation of wind turbine components, especially the colossal wind turbine blades, presents a unique set of challenges. That's why we help clients transport wind turbine parts ...

Wind turbines contain several thousand large components. While most can be easily shipped nationwide, wind turbine blades pose a major logistical challenge. Averaging 200-300 feet long, utility ...

With this global network and set-up, you have access to the know-how and vessels you need to move and ship your wind turbines wherever they need to be safely and efficiently - whether that's an ...

We are transporting hundreds of wind turbine generator sets, blades and foundations all over the world, and we bring this wealth of experience to every client we serve.
