

Earlier this month, California-based flow battery developer Quino Energy received \$10 million in investment funding from India-based Atri Energy Transition to establish production in India for its electrolyte ...

By combining our innovative technology with Storion's design and manufacturing capabilities, we are well-positioned to deliver flow battery solutions that enhance grid reliability and operational

US startup Quino Energy has developed a water-based flow battery technology, which is expected to reduce energy storage costs, improve safety and even contribute to the AI boom, co-founder and ...

Quino Energy has developed a process that converts quinone raw materials - dyestuff chemicals - directly into high-performance, long lifetime quinones using the flow battery system itself as the production reactor.

For those of you new to the topic, flow batteries offer a potentially higher-performing, lower-costing alternative to the familiar lithium-ion energy storage platform. Flow batteries deploy...

Unlike lithium-ion cells, flow batteries store liquid electrolytes in external tanks. While the system is bulkier and traditionally costlier than lithium-ion, it also offers significantly longer cycle life, the ...

A flow battery combines two liquid reactants - like a fuel and an oxidizer - inside an electrochemical cell that plays a similar role as a car's engine. With flow batteries, if you want a car to run ...

Flow batteries can offer advantages that conventional batteries lack. Most importantly, they are not subject to thermal runaway and fire propagation, like lithium-ion. "They don't catch fire, so they're safer," ...

Flow battery specialist Quino Energy has announced that its 10 kW/100 kWh prototype is now operational, using material produced using its zero-waste, continuous flow production process that achieved ...
