

The Net Surplus Compensation Rate (NSCR) compensates Net Energy Metering (NEM) customers for electricity they produce in excess of their on-site load over the course of a 12-month period, referred ...

It stipulates that if a Change in Law results in adverse financial loss or gain to the solar power generator, compensation is due to restore the party to the same financial position as if the ...

Most community solar programs adopt a subscriber model so two main groups of people receive direct compensation: participants (often "subscribers") and project owners.

The Net Surplus Compensation (NSC) program allows utilities to offer payment for surplus energy sent back to the electric grid by your home renewable energy systems.

All energy exported to the grid (e.g., 15-minute netting periods) is credited at a rate other than retail (e.g., value of solar, avoided cost). Buy-all, Sell-all - Gross energy consumption is charged at the ...

This is where compensation mechanisms come to the picture in specifying how an electric utility pays for the energy produced by a customer that is self-consumed and/or exported to the utility grid.

The past few years has seen a surge in reactive power compensation filings for solar and wind-powered projects, with many for facilities in MISO and PJM.

Our NEM program is for customers who generate renewable energy. The Renewable Energy Credit (REC) portion of the excess generation compensation is the added value provided because the ...

In 2016, FERC eliminated the exemption for non-synchronous generators from the requirement to provide reactive power.⁴ As such, non-synchronous generators became required to provide reactive ...

Under a gross metering policy, all electricity generation from a residential solar PV system is sent to the grid and compensated at the wholesale price of electricity, and all electricity ...
