

This 140A high voltage solar controller uses MPPT technology to achieve maximum energy collection efficiency by monitoring the voltage and current output of the solar panel in real-time.

Up to 450V input, which means it can handle more solar panels connected in series, offers comprehensive protection keep your system safe at all times.

These controllers, with their amplified voltage capabilities, are indispensable for large-scale solar installations, ensuring efficient and reliable power distribution.

A 140V solar panel can serve as a primary DC power source for applications such as telecom equipment, surveillance cameras, irrigation controllers, and LED lighting systems.

Efficient and versatile, the 140A MPPT Solar Charge Controller is perfect for 48V systems. Review its high voltage input, LCD display, and multi-battery compatibility.

Ensure your solar panels harvest every bit of energy with our MPPT and PWM solar charge controllers. Perfect for mobile, off-grid, and home use, they connect easily with other Victron components to build ...

Born for Energy Storage Batteries: Designed for applications requiring ...

Born for Energy Storage Batteries: Designed for applications requiring efficient energy transfer from solar arrays to battery storage over long distances, this controller supports high-voltage systems to ...

This 140A high voltage solar controller uses MPPT technology to achieve ...

The innovative MPPT (Maximum Power Point Tracking) technology ensures that the varying voltage of the solar panels is converted into a constant voltage to charge the battery.

MPPT charge controllers give approx 30% more power than a PWM charger and you can connect high voltage panels to lower voltage battery banks.

For GV-10-LI-14.2V, you do not need #9632. The GV-10 was designed to maximize the usable energy from a 140W panel. With Continuous Maximum Power Point Tracking, and night consumption of only ...
