

Solar panels charge and generate electricity automatically

How does a solar panel system work?

A solar panel system consists of three basic parts: solar panels, an inverter, and a solar gateway. Solar panels capture sunlight and convert it into electricity. This electricity is then converted into clean energy by the solar inverter, which can power the lights and appliances in your home.

How do solar panels generate electricity?

This process is constant. Over 500 million tons of hydrogen atoms are converted into helium every second, resulting in photons that generate solar energy here on Earth. In a nutshell, solar panels generate electricity when photons (those particles of sunlight we discussed before) hit solar cells. The process is called the photovoltaic effect.

What is solar energy & how does it work?

What Is Solar Energy? Solar energy is basically sunlight, super-abundant and hitting Earth daily. It all starts with photons (tiny light particles) traveling 93 million miles from the sun to your roof.

How do solar photovoltaic cells convert sunlight to electricity?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. The efficiency that PV cells convert sunlight to electricity varies by the type of semiconductor material and PV cell technology.
