

Solar panels installed on the roof collapsed

Can solar panels damage a roof?

Fortunately, roof damage from a solar panel installation is extremely rare because installers take precautionary steps while installing panels to prevent leaks and other damage. Like any home improvement project, using the right service provider is essential to a rooftop solar job.

How do I avoid solar on my roof?

Another option to avoid solar on your roof entirely is to install a ground mount or join a community solar plan and receive solar energy from an offsite location. A rooftop solar panel installation is a great investment that won't lead to roof damage when you work with a professional, experienced installer.

How long do solar panels last?

These installations will typically last around 30 to 35 years, so it's important to ensure installing panels doesn't cause harm to your roof. Fortunately, roof damage from a solar panel installation is extremely rare because installers take precautionary steps while installing panels to prevent leaks and other damage.

Do solar panels need holes?

One of the biggest concerns for property owners is the holes needed in their roofs to secure their solar panels. During installation, workers will drill holes in your roof to secure the racking which will hold your panels. These holes are for lag bolts, which secure your panels to your roof, and are designed to withstand extreme weather.
