

Perhaps the most significant measure is the government's clear commitment to energy storage. Spain has now set a national storage target of 22.5 GW by 2030, underlining its recognition ...

Spain's accelerating renewable deployment has exposed growing challenges of intermittency, market volatility, and system stability, underscoring the urgency of energy storage ...

Discover what electrical substations are, how they work and our drive to innovate to improve energy distribution.

The selected projects range from large-scale battery systems to industrial thermal storage and new pumped-hydro plants, reflecting both the technological maturity of the sector and ...

Spain has established itself as a solar powerhouse in Europe, but a quiet bottleneck threatens the momentum: energy storage. In 2024 alone, the country experienced more than 1,100 ...

A Madrid-headquartered developer has proposed a solar-plus-storage system in Spain with a 100MW/200MWh battery energy storage system (BESS).

Finally, the results show that batteries and Pumped Storage Hydro (PSH) have different roles in the Spanish electricity system with a high renewable penetration. While PSH is mainly used ...

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes ...

With the permitting stage of the project complete, construction is due to begin in January 2025. The development comprises two 25 MW/18.75 MWh systems in what REE says will be the ...
