

How do you store lithium batteries in a warehouse?

To store lithium batteries in a warehouse, keep them in a cool, dry environment with temperatures between 32°F and 77°F (0°C to 25°C). Ensure they are charged to about 40-60% capacity, and store them upright in a secure location away from direct sunlight and moisture. Regularly inspect the batteries for any signs of damage or swelling. 1.

How safe is lithium-ion battery storage?

Safe lithium-ion battery storage is not only about infrastructure--it also depends on people. Personnel must be trained to recognize battery hazards, handle batteries correctly, and respond to emergencies. Training significantly reduces the risk of accidents.

What are the storage requirements for lithium-ion batteries?

The storage requirements for lithium-ion batteries are a mix of the right ventilation, managed humidity level, and location regulation. Lithium-ion batteries should be stored in cool, moderately dry conditions away from direct sunlight, heat/flame-encouraging materials, and humid elements.

Why do lithium batteries need to be stored properly?

Because of a propensity to self-heat, properly storing lithium batteries is necessary to avoid fires that can harm you and your property. When the lithium battery temperature is -20 to 5°C and there is an incoming charge current over 10 amps, self-heating can occur. The result can be the release of gas, which can cause fires, and even explosions.
