

The battery status of the solar container is not displayed

Charge controller LCD displays "load on" icon and batteries seem to be draining but no load is connected. Hi! Thanks to all of you for helping me solve the controller not charging issue.

Verify that charge settings match battery specifications (e.g., float, bulk, and absorption voltages). Check temperature sensor (if applicable) to ensure accurate readings.

Use the VictronConnect app, a solar charger display or a GX device to check the battery voltage and PV voltage. In case the above step is not possible, measure the battery and PV voltages at the solar charger terminals ...

Fix solar charge controller issues fast! Learn effective solutions for common problems like battery charging, display errors, and overcurrent.

While solar charge controllers ensure that your solar panels and batteries operate smoothly, they can sometimes display errors that halt the entire system. So, what should you do if your solar charge ...

We'll present common culprits, such as reversed battery connections, low voltage, or even a faulty display. And we won't leave you hanging--practical fixes for each problem will also be provided.

Many times, a source of irregular voltage from solar panels in the battery can damage or malfunction your controller. So, to avoid this problem, keep the wiring connections secure and consistent.

Troubleshoot your solar charge controller display not working with our step-by-step guide. Learn expert tips to resolve common issues efficiently.

If the display is unable to make a connection with the solar charger or if the text "" Disconnected" is scrolling through the screen, the MPPT Control has not established communications with ...

Learn what to do when your solar charge controller display goes blank. Includes common causes and quick fixes.
